

EL FUTURO SEGÚN BEN BERNANKE Y LA FED: SILVIO GESELL

Ben Bernanke, head of the world's most important central bank, takes up the ideas of Argentine-German economist Silvio Gesell, who has already been praised by economists John Maynard Keynes, such as Irving Fisher, and instructs the Federal Reserve (FED) to become interest-free in the future To create money.

Economist Silvio Gesell

This brings Ben Bernanke closer to the Rheingold principle.

Although the Rheingold principle does not refer to Keynes, Gesell or Fisher, it realizes interest-free money and a decentralized, performance-based money creation.

Greenspan, the predecessor of Bernanke

Bernanke now only has one problem, because he does not have Rheingold at his disposal:

1. The freedom of interest does not reach the borrowers. Americans pay almost 30% on their credit card debt and the owners of the banks will not change that.
2. Bernanke can set interest rates as he wants, if no one asks for loans, because because of the simultaneous "austerity" policies of almost all countries investments are not worthwhile, no one will invest and so can create income.
3. The banks will stock up, but they are not stupid. They'll stock up on it, because hello, because it's free and because it makes another bank otherwise. So we can soon experience completely unfounded "bubbles" in the financial sector and see, for example, stock prices, oil prices, food reach complete gaga values, which in turn exerts yield pressure on the companies that produce reales. Wage cuts and price inflation will be the result. Wonderful.

Clara Schumann on the 50th Rheingold

There we Rheingolder have decidedly better. Freedom of interest reaches us directly. And should one day we want to pay interest, we can decide for ourselves. The interest is then ours anyway.

And we can and will maintain the purchasing power of our own Rheingold with increasing labor income.

Here, the renowned business journalist Philipp Löpfe has described Bernanke's new requirements in the Swiss daily tagesanzeiger.ch and

compared them with the WIR project, which has been ensuring prosperity in Rheingold for decades in Switzerland.
